Special Conditions

Methods and Limitations

1. A maximum of 4 hardened off plantlets from each virus eliminated variety will be provided to the client. If more are required please contact the AWRI for relevant pricing.
2. For batches of more than 5 varieties please contact the service for further details of availability and special pricing.
3. Grapevine rupestris stem pitting-associated virus (GRSPaV) is present in almost all the varieties. We do not guarantee the removal of this virus. Once the plants are established in the field GRSPaV is detectable by PCR in symptomless plants.
4. Since mealybugs and scale insects are the vectors of most grapevine viruses, these may re-infect the young vines in the vineyard. Annual testing of mother blocks is recommended.
5. No guarantee is made for elimination of the viruses outside of the A1 list. All virus eliminated material is tested using the standard screens of the AWRI Virus testing service. If a virus outside of these screens is of concern, please contact the AWRI for further information and options.

For more information visit our website: www.awri.com.au/
